Technical Advisory Committee Meeting

June 7, 2016

**Bureau of Economic Geology
University of Texas at Austin**

A large, circular embossed design on a textured brown background. Inside the circle is a map of Texas, and below it, the letters "BEG" are embossed.

Introduction

Seismic Activity in the Central and Eastern US

All earthquakes in the last 35 years believed to be primary events (e.g. not aftershocks)

Seismic Activity in Texas and Elsewhere

Frohlich, University of Texas

All earthquake epicenters in the
modern USGS-ANSS catalog

Fluid injection can cause Earthquakes

KEY FACTORS:

- fault system characteristics and geologic history
- *in situ* stress state
- reservoir hydraulic continuity and capacity
- fluid budgets and pressure
- these factors are dynamically coupled...

What we think we know about injection EQs

- ❖ Some of the anomalous seismicity in the central US is associated with injection
- ❖ Geologic and Geophysical aspects:
 - larger earthquakes occur in the crystalline basement
 - faults being triggered are well-oriented for failure in today's tectonic stress field
 - ground motion is strong but is peaked directly above the earthquakes
- ❖ Hydrologic aspects:
 - the association between injection and triggering is statistically strongest for injection rate
 - pressure changes in the injection interval move fast and far
 - seismicity generally dies down quickly when injections are halted but can linger for decades
 - disposal into sub-normally pressured zones can induce earthquakes
- ❖ Some important facts:
 - the vast majority of wastewater wells do not produce earthquakes
 - injected wastewater comes from lots of sources, not just from flow-back of fracking fluids
 - fracking is rarely the cause of damaging earthquakes but can generate moderately sized ones

A large, circular embossed design on a textured brown background. Inside the circle is a map of Texas, and below it, the letters 'BEG' are embossed.

TexNet

Texas is Geologically Diverse

12+ distinct tectonic areas

Anadarko Basin
Amarillo Uplift
Palo Duro Arch
Midland Basin
Delaware Basin
Trans-Pecos/Marathon
Val Verde
Gulf Coast
Talco/Mexia/Balcones
East Texas Basin
Sabine Uplift
Ft Worth Basin
Llano/Bend Arch

Many known fault systems that are poorly constrained in the subsurface

Injection History is Diverse

- ❖ ~50,000 injection wells permitted since 1930's
- ❖ ~34,000 active injection wells associated with enhanced oil production
- ❖ ~8,000 permitted disposal wells (UIC Class II)

Governor – Legislature

Technical Advisory Committee

❖ **TexNet Permanent and Transportable Array Products**

network; earthquake data, locations, calibrated magnitudes, catalog

❖ **Seismology**

earthquake sequences, source characterizations, triggering analysis

❖ **Geologic Characterization**

in situ stress, fault system characteristics, fluid data and budgets, reservoir-to basin-scale geomodels

❖ **Geomechanics and Reservoir Engineering**

pore pressure estimations, reservoir hydraulic continuity, fault triggering analysis, fault rupture mechanics

Moving from Associative to Mechanistic Analysis

Frohlich et al. (2016)

Fan et al. (2016)

- ❖ accurate and detailed seismicity/ground-shaking data in Texas
- ❖ understanding fault-triggering mechanisms
- ❖ assessing the seismogenic potential of Texas basins
- ❖ research that can be used to improve fluid disposal operations

TexNet Network and Research Proposed Funding

TexNet Seismic Network

Equipment
\$1,701,500

Deployment and Operations
\$1,181,362

Seismology

UTIG and BEG
\$265,827

SMU
\$201,343

Hydrology, Faults, Geomodels

BEG
\$190,906 & \$179,835

Geomechanics and Reservoir Modeling

UT-PGE & BEG
\$190,530 & \$192,251

TAMU TEES TBD
\$300,000

TexNet Network and Research Budget

TexNet Seismic Network	Equipment		Deployment and Operations						SubTotals by Cost

TexNet Timeline 2015-2016

TASK or EVENT	2015			2016			
	June	Jul-Sep	Oct-Dec	Jan-Mar	Apr-Jun	Jul-Sep	Sep-Dec
Texas House Bill 2 Supplemental Appropriation to BEG							
seismic network initial design and preliminary costing							
research program design and vesting of research contributors							
RFP posted, proposals reviewed and ranked							
recruitment of TexNet Manager, Research Principal Investigator							
negotiations with leading vendor							
commence research (UT and SMU)							
contract negotiations with leading vendor							
TexNet Network Manager and Principal Investigator hired							
seismic network design revised (installation method upgraded)							
TexNet permanent site locations identified and vetted							
identification of suitable site landowners							
vendor contact executed							
revise research plans, receive Texas A&M research scope							
develop strategy for temporary station deployment							
Governor's Technical Advisory Committee seated							
TexNet Technicians hired							
commence receiving network and hub equipment							
conduct initial site evaluations							
perform final site evaluations							
contracting with site landowners							
permanent station installation							
temporary station installation							
2016 report to Governor and Legislative Committees							

TexNet: Longer-Term Science and Timing

State-Wide and General Topics

1. network procurement and installation
2. network management and data stream
3. R&D products to improve network performance
4. EQ compilations and characterizations
5. stress and fault mapping
6. outreach

Ft Worth Basin Integrated Study

1. local seismic networks and EQ studies
2. basin-scale fluid budgets and pore pressure
3. stress characterization (Stanford)
4. fault characterization
5. 3D basin geo and hydrologic and modeling
6. fault reactivation analysis and mapping
7. reservoir modeling of seismicity mechanics
8. assessment of basin seismogenic potential

Panhandle Seismicity Study

1. seismicity analysis (existing and TA stations)
2. *integrated geological characterization
3. assessment of basin seismogenic potential

Greater Permian Basin Integrated Study

1. local seismicity base-line studies and analyses
2. *integrated geological characterization
3. assessment of basin seismogenic potential

Eagle Ford Operating Area Integrated Study

1. numerous local seismicity acquisitions and analyses
2. *integrated geological characterization
3. assessment of basin seismogenic potential

2015 2016 2017 2018 2019 2020 2021 2022

TexNet

Texas Seismological Network

Alexandros Savvaidis, PhD, and Peter Hennings, PhD

**Bureau of Economic Geology
University of Texas at Austin**

- ❖ **TexNet Management**
- ❖ **TexNet Hardware**
- ❖ **Site Assessment**
- ❖ **TexNet Operational Services**
- ❖ **TexNet Products**

- ❖ **Alexandros Savvaidis, PhD, BEG, Project Manager**
- ❖ **Peter Hennings, PhD, BEG, PI of CISR**
- ❖ **Ellen Rathje, PhD, CAEE, PI of CISR**
- ❖ **Bissett Young and Tania Murkherjee, BEG, Research Scientist Assoc**
- ❖ **Mark Blount, BEG, External Affairs**
- ❖ **Cliff Frohlich & Jake Walter - Univ. Texas Institute for Geophysics**
- ❖ **Heather De Shon, Chris Hayward & Brian Stump - SMU**
- ❖ **Scott Tinker, BEG, Director and Texas State Geologist**
- ❖ **Michael Young, PhD, BEG, Associate Director for Environment**

- ❖ To monitor, locate, and catalog seismicity across Texas, capable of detecting and locating earthquakes with magnitudes $\geq M2.0$ (aka—Backbone)
- ❖ To improve investigations of ongoing sequences by deploying temporary seismic monitoring stations and conducting site-specific assessments, especially for
 - Events $> M3.0$ in or near urban areas, or
 - Events co-located where ongoing human activities may be related to earthquake activity

Challenge for Texas

- ❖ Existing network infrastructure is not sufficient to fully identify hypocenter depths of earthquakes in Texas
- ❖ Earthquake activity scattered across the State
- ❖ Network needs to be densified

Solution – Expand Monitoring Network

- ❖ Fill in the gaps
- ❖ Add 22 additional stations, providing 40 station backbone
- ❖ The ~36 temporary stations will densify areas of Texas that need special focus

- ❖ **Seismicity**
- ❖ **Existing broadband real-time stations**
- ❖ **Existing information from TA Seismological Stations**
 - **Noise level (Power Density Function)**
 - **Soil amplification (Noise and Earthquake Data)**
 - **Shear wave velocity (V_{sz})**
- ❖ **Site Geology - Topography**
- ❖ **Tectonics**
- ❖ **Location of oil & gas wells**
- ❖ **Cell coverage**

Example of Factor: Site Geology & Topography

Higher elevation
areas are
prioritized

- ❖ Stiff material
- ❖ Isolated
- ❖ Cell coverage

Importance of loose (younger) versus stiff (older) formations

Permanent Station Setup

Pole mount hardware
Installation:

- ❖ 6 Channel Datalogger
- ❖ Wireless Modem
- ❖ 200Ah Battery
- ❖ 150W Solar Panel, and
- ❖ 120sec – 3 Component
Post-Hole Seismometer

Borehole Setup

- ❖ Cased posthole up to 20 feet
- ❖ Steel casing with a welded flat base plate on the bottom
- ❖ Borehole preparation will follow ASTM DH Seismic (D74000)

CROSS-SECTION VIEW

Direct Burial Installations

- ❖ 3 Component, 20 sec Seismometer
- ❖ 3 Component Accelerometer

Station components (data logger, solar panels, etc.) will be identical to permanent stations

- ❖ TX is the TexNet Code on the International Federation of Digital Seismograph Networks
- ❖ DOI (Digital Object Identifier)
<http://dx.doi.org/doi:10.7914/SN/TX>
- ❖ Data Provider Agreement in place with IRIS for archiving TexNet data collected from permanent and portable stations
- ❖ Time Series Data available to the public through IRIS and TexNet Hub

- ❖ Permanent and portable station deployment
- ❖ Data acquisition
- ❖ Local data archiving
- ❖ Network monitoring (QC,QA)
- ❖ Real-time earthquake information
- ❖ Updated manual earthquake information
- ❖ Monthly earthquake catalog
- ❖ Web portal

- ❖ **Earthquake Source Information (Real Time and Manual)**
 - **Minimizing the hypocenter uncertainties**
 - **Local and moment magnitude**
 - **Fault plane solutions**
- ❖ **Updated velocity model**
- ❖ **Shakemaps (real-time)**

We have established a process for data and hardware management

- ❖ **Data from all stations will be transferred to TexNet HUB and used directly in TexNet operations**
- ❖ **Data and corresponding analysis results will be available to the public**
- ❖ **An individual can adopt a station or share data**
- ❖ **Portable installations managed by TexNet Team**

- ❖ **Areas of deployment based on:**
 - **Spatiotemporal (Accelerated/Decelerated) Seismicity Distribution**
 - **Societal / Infrastructure Risk**
 - **Baseline Seismicity Studies**
 - **Specific Scientific Questions Related to Research Products**
- ❖ **Provisional areas**
 - **Ft Worth Basin**
 - **Snyder area**
 - **Permian Basin region**
 - **Eagle Ford Play area**
 - **Panhandle**
 - **East Texas**

- ❖ **Nanometrics (Ontario, Canada) awarded contract after public bidding process. Hardware delivery expected by the end of June, 2016**
- ❖ **We have identified provisional locations for each seismometer, both permanent and auxiliary. Site visits are ongoing.**
- ❖ **We have established our leadership team for TexNet**
- ❖ **Current expectation is for system to be operational and to begin streaming data by Summer 2016**
- ❖ **Critical issue - identifying landowners and securing lease agreements**

Summary and Update of Earthquake Activity in Texas

Alexandros Savvaidis¹, PhD and Jacob Walter², PhD

¹Bureau of Economic Geology

²Institute of Geophysics
University of Texas at Austin

- ❖ **Tectonic Regime**
- ❖ **Historical Seismicity**
- ❖ **Instrumental Seismicity**

Tectonic Regime of Texas

12+ Distinct Tectonic Areas

- ❖ Anadarko
- ❖ Amarillo Uplift
- ❖ Palo Duro Arch
- ❖ Midland Basin
- ❖ Delaware Basin
- ❖ Trans-Pecos/Marathon
- ❖ Val Verde
- ❖ Gulf Coast
- ❖ Talco/Mexia/Balcones
- ❖ East Texas Basin
- ❖ Sabine Uplift
- ❖ Ft Worth Basin
- ❖ Llano/Bend Arch

Historical Seismicity... before 1973

Major events with felt $M > 5$

- ❖ 30th July 1925, $M = 5.4$ - Panhandle
- ❖ 16th August 1931, $M = 6.0$ - Valentine
- ❖ 20th June 1936, $M = 5.0$ - Borger
- ❖ 12th March 1948, $M = 5.2$ - Dalhart

Magnitude	Typical Maximum Modified Mercalli Intensity
1.0 - 3.0	I
3.0 - 3.9	II - III
4.0 - 4.9	IV - V
5.0 - 5.9	VI - VII
6.0 - 6.9	VII - IX
7.0 and higher	VIII or higher

**Not Felt*

**Considerable – Total Damage*

Magnitude derived from Macroseismic Intensities (perceived ground motion in the Modified Mercalli Intensity Scale)

http://earthquake.usgs.gov/learn/topics/mag_vs_int.php

16th August 1931, $M = 6.0$ - Valentine

Instrumental Seismicity, 1973 ... today

One event with $M > 5$

❖ 14th April 1995, $M_w = 5.7$ – Alpine

Instrumental Seismicity, 1973 ... today

Events with $M \geq 4.0$

- 15th February 1974, $m_b=4.5$ - Perryton
- 1st August 1975, $m_b=4.8$ - Delaware
- 7th June 1977, $M_L=4.0$ - Snyder
- 16th June 1978, $m_{bLg}=4.6$ - Snyder
- 9th April 1993, $m_{bLg}=4.3$ - Fashing
- 11th September 2011, $M_w=4.3$ - Snyder
- 20th October 2011, $M_w=4.8$ - Fashing
- 17th May 2012, $M_w=4.8$
- 25th January 2013, $M_w=4.1$
- 2nd September 2013, $M_w=4.2$
- 2nd September 2013, $M_w=4.3$
- 7th May 2015, $M_w=4.0$ - Venus

Timpson

References of Recorded Instrumental Seismicity
